

## Wastewater management roadmap towards 2030 Industrial area

## Imagining & Implementing the Utility of the Future

- Can we implement a system where there is no waste?
- Can we and should we get away from the “pipe in/pipe out” approach? What is the right scale for decentralized systems? What drivers should communities consider?
- Can we leverage the Food-Energy-Water nexus to increase our value to the community?

## Imagining & Implementing the Utility of the Future

- As we replace and renew infrastructure, what changes should we be making for use 100 years from now?
- What would metrics look like for this different infrastructure system? Do we need to establish metrics?

## Imagining & Implementing the Utility of the Future

- How do we partner with Urban Planners to incorporate water systems into urban design and planning?
- How can we better incorporate forest systems into water management programs?

Reuse Humor  
*It never gets old.*  
**Most Importantly – keep a sense of humor –  
because potty humor never gets old**
